

DEVOPS & AI SYSTEMS ARCHITECTURE

Engineering Serendipity: Building for Creativity in Generative AI Systems

Escaping statistical attractors through entropy injection, structured constraints, and mutation chains.

 Coloring Book IdeaGen

Kateri Waltermeyer, AI Researcher & Creative Technologist

THE DEFAULT FAILURE MODE

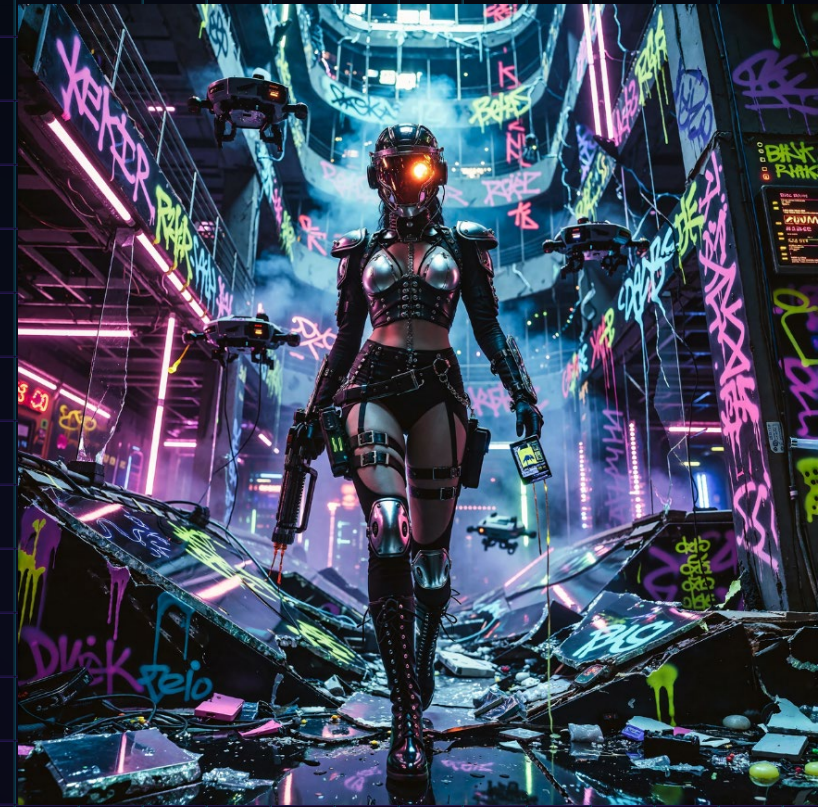

Generative Models Revert to the Mean

BASELINE PROMPT

"Give me 5 creative cyberpunk concepts."

Statistical probability drives models to the centroid: rain-slicked alleys, glowing katanas, neon signs.

Attractor convergence is not a bug. It is the math operating as designed.

Why Temperature Does Not Fix Attractors

SAMPLING PARAMETER

Temperature = Stochastic Jitter

Widens token probability across the existing attractor basin.

Produces chaotic phrasing around the identical centroid.

ARCHITECTURAL INTERVENTION

Pipeline Steering = Relocation

Shifts coordinates in latent space before generation begins.

Forces exploration into uncharted, viable territory.

Four Strategies for Enforcing Latent Drift

STRATEGY 01

Random Noise

Orthogonal external signals inject chaotic divergence.

STRATEGY 02

Structured Noise

External search metrics and invariant grammar spines.

STRATEGY 03

Negative Gates

Static phrase blacklists and dynamic deduplication loops.

STRATEGY 04

Mutation Chains

Single-dimension state evolution over iterative DAG steps.

Random Noise: Fuzzing Latent Vectors

LIVE INPUT INGESTION (GOOGLE TRENDS)

5th → "patient zero music video"

30th → "slipknot concert visuals"

72nd → "tyler shough quarterback"

Unrelated entropy forces the model to synthesize disparate semantic domains.

GENERATED SYNTHESIS

Slipknot × Cyberpunk Cathedral

"Abandoned server farm repurposed into a cathedral of pulsing cables. Masked warrior clad in carbon-fiber armor dripping liquid LED light."

Centroid shattered by non-correlated context.

Dynamic External Steering via Search Metrics

STRUCTURED INPUTS

```
{
  "Content Pillar": "Fantasy",
  "Theme": "Adorable Fantasy Creatures",
  "Niche": "Adult Coloring Books"
},
{
  "Content Pillar": "Cute Gothic",
  "Theme": "Gothic Girls in Ornate Hats",
  "Niche": "Adult Coloring Books"
},
{
  "Content Pillar": "Fantasy",
  "Theme": "Worlds in a Bottle",
  "Niche": "Adult Coloring Books"
},
}
```

API PAYLOAD → PROMPT INJECTION

```
Content Pillar: {{ $json.Content_Pillar }}
Theme: {{ $json.Theme }}
Here are curated SEO keywords with search
signals:
keyword: {{ $json.keyword }}
search volume / demand score:{{
$json.demand_score }}
competition score:{{ $json.competition_score
}}
opportunity score: {{
$json.opportunity_score }}
ppc bids (low): {{ $json.source.bids.low }}
ppc bids (high):{{ $json.source.bids.high}}
cpc: {{ $json.source.cpc }}
idea_name: {{ $json.idea_name }}
TASK:
Generate 3-4 specific, actionable coloring
book concepts.
Each concept must have:
1. a core theme anchor directly derived from
the Theme and idea_name
2. a scene or setting that makes it visually
specific
```

High Opportunity Filtering

Replaces open-ended randomness with mathematically backed market demand.

Targeted Coordinate Shift

Guides generator to under-served creative niches.

Static Invariants: Spines and Wildcards

RIGID GRAMMAR SPINE

{Subject} | {Atmosphere} | {Wardrobe} | {Action}

DYNAMIC WILDCARDS

"Adult female ex-soldier" | "Salted rain and humidity" | "Flowing black technical robes" | "Crossing narrow bridge"

prompts > spines > 01_character_portrait.txt

```
1  __/character__
2  __/archetype__
3  __/augmentation__
4  __/wardrobe__
5  __/expression__
6  __/gear__
7  __/direction__
8  __/lighting__
9  __/atmosphere__
10 __/composition__
11 __/detail__
12
```

prompts > wildcards > character.txt

```
1  A striking adult woman with a severe
2  An adult man with a shaved head, cyb
3  An adult woman with a high red ponyl
4  An adult androgynous hacker with cro
5  An adult female street medic with da
6  An adult female corporate defector v
7  An adult street-born mechanic with c
8  An adult masked ronin with a narrow
9  An adult female nightclub performer
10 An adult industrial diver with cropy
11 An adult courier with a compact bui
12 An adult female ex-soldier with clos
13 An adult information broker with am
```

Fixed syntax guarantees production quality while allowing infinite internal variation.

Negative Constraints and Novelty Gates

Static Banned Lists

Disables exhausted token branches before generation.

FILTER & REJECT PIPELINE

```
const BANNED_PATTERNS = [
  "gothic fantasy", "neon rain",
  "hooded figure", "mystic realm"
];

if (BANNED_PATTERNS.some(p => text.includes(p))) {
  rejectionCount++;
  return mutateAndRetry(seed);
}
```

Dynamic Novelty Gates

Compares candidates against session history to prevent drift back to the centroid.

FILTER & REJECT PIPELINE

You are creating concepts for a kawaii-goth coloring book. Create a list of 10 concepts, 5-10 words each. Only output the concepts, one per line.

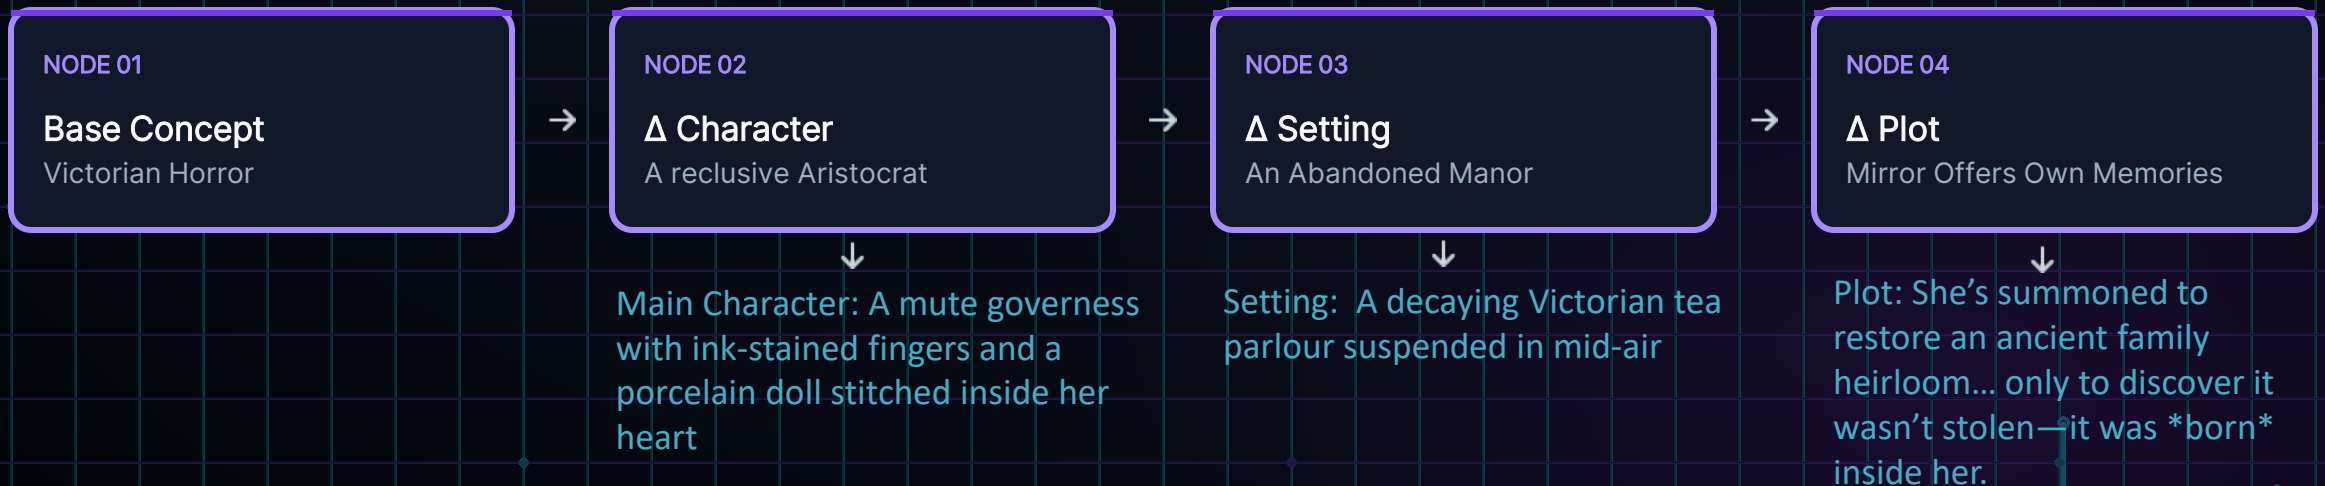

Gothic kitten with lace collar | Moonlit vampire in velvet cloak | Crimson roses & black choker | Skeleton fox holding candy cane | Teardrop eyes and pearl necklace | Velvet-draped ghostly dancer | Black lace dress with starry hair | Bewitched cat with witch's hat | Crystal skull with glittery eyes | Dusk-walking crow with ribbon tail

You are creating concepts for a kawaii-goth coloring book. Create a list of 10 concepts, 5-10 words each. Only output the concepts, one per line. DO NOT include any of the following concepts:

Kawaii goth fairy with sparkles and wings | Pumpkin lantern with cherry blossom design | Chocolate bunny in tattered veil | Rainbow aura around haunted doll | Whimsical shadow creature with plush ears | Starlight moth wearing tiny crown | Frostbitten hedgehog in silk scarf | Mystic owl clutching tea cup | Glowing jellyfish in ink swirls | Lilac-haired spirit whisperer with bow

Mutation Chains: Stateful Latent Perturbation

Mutate exactly one dimension per pipeline step while freezing all others:

Translating Techniques to Image and Video Latents

STRATEGY	LLM / TEXT SPACE	DIFFUSION / TENSOR SPACE
Random Noise	Google Trends injection	Initial Gaussian tensor perturbation
Structured Noise	Wildcard grammar spines	ControlNet depth & Latent Blending
Negative Constraints	Banned substring arrays	Negative prompt embeddings & CFG tuning
Mutation Chains	Single-key state evolution	Sequential masked img2img walks

PIPELINE QUALITY

Evals as CI/CD Quality Gates

STAGE 1 · PRE-GEN

Input Linting

Filters zero-demand and cliché keywords before invoking model APIs.

STAGE 2 · INTRA-GEN

Novelty Circuit Breaker

Rejects duplicate vectors in-flight and retries along mutated axes.

STAGE 3 · POST-GEN

Promotion Scoring

Only highest-scoring novelty artifacts deploy to production stores.

Signal Ingestion, Spine Schema & Circuit Breaker

1. INPUT SIGNAL (STRATEGY 01: RANDOM NOISE)

RAW SEED: "patient zero music video"

Ingested from Google Trends API to supply uncorrupted orthogonal entropy.

2. STRUCTURAL SPINE SCHEMA (STRATEGY 02B)

```
{  
  "character": "<archetype + visual anchor>",  
  "setting": "<location + environmental mechanics>",  
  "atmosphere": "<lighting + audio texture>",  
  "plot": "<inciting action + conflict state>"  
}
```

Strict JSON key constraints preserve downstream agent execution.

3. CIRCUIT BREAKER RULES (STRATEGY 03)

```
const BANNED_TROPE_PATTERNS = [  
  "neon blue eyes", "katana", "cyber-ninja",  
  "hooded trenchcoat", "saving humanity",  
  "high school student", "giant mecha",  
  "rogue hacker", "rain-slicked neon street"  
];
```

STEP 0 · UNCONSTRAINED CENTROID

REJECTED

"A hooded hacker with glowing neon eyes and a katana stands on a rain-slicked Tokyo street, hacking a mainframe to stop a virus."

Violations Detected (5/10): hooded, neon eyes, katana, rain-slicked, hacker
→ Redirect to Mutation DAG

The Mutation Chain DAG: 4-Node Controlled Drift

NODE 01 · Δ CHARACTER

Rule: Mutate character only; drop hacker tropes.

Acoustic Archivist

Disgraced researcher in an antique brass diving helmet fitted with vibrating acoustic diaphragms across her collarbone.

NODE 02 · Δ SETTING

Rule: Mutate setting only; shift subterranean.

Submerged Opera House

Flooded hall directly beneath a decommissioned server farm; fiber-optic cables hang underwater like sea anemones.

NODE 03 · Δ ATMOSPHERE

Rule: Mutate atmosphere; inject non-standard resonance.

Chladni Resonance

Subsonic hums rattling conductive oil into geometric ripples under amber emergency strobes against crumbling frescoes.

NODE 04 · Δ PLOT

Rule: Mutate plot; subvert "save the world" savior tropes.

The Acoustic Carrier

Her brass suit is a soundboard playing a lost frequency—making her "Patient Zero" wiping the city's shared memory grid.

ARCHITECTURAL PRINCIPLE

**Don't ask the model to be creative.
Give it somewhere interesting to go.**

1. What can I vary?

2. What must I preserve?

3. What pressure selects?
